Ortho Tuff Skin Mats

Ortho Tuff Skin mats are great to relieve the stress of a long day of standing at your work station! Customers place Tuff Skin mats at laundry and dry cleaning presses, sorting stations, folding tables, in front of ironers and automated folders and at counter point of sale registers. They truly make a hard surface a soft surface. John Sullivan gets very positive feed back on every sale he makes of the Ortho Tuff Skin mat. He recommends the 3/4" thick mat for most locations for comfort and durability. Tuff Skin comes in a variety of sizes – talk to John Sullivan or Chris Schiefelbein to get sizes and pricing. Most Tuff Skin mats ship in less than two weeks.

John Sullivan, Supply Sales, holds a Tuff Skin sample while standing on a Tuff Skin mat in front of a Chicago Dryer ironer.

Water Conservation for On-Premise Laundries

Milnor's 60 lb. capacity washer-extractors feature RinSave® water conservation technology standard

Current economic conditions have forced healthcare facilities to focus on operating costs, particularly back-of-the-house operations – including the on-premise laundry, according to healthcare operators.

This innovative process called RinSave® eliminates up to two high level rinses (.33 gallons per pound processed) and up to 10 minutes in the wash formula. It saves labor, water, sewer and electricity which are the largest direct operating expenses in the laundry. RinSave® conserves water, further substantiates your facility's green program and is infinitely sustainable, without further investment.

CHICAGO

including remote connect for cold enclosures.

Other Huebsch dryers in sizes from 25# to 200#. And ask about stainless steel cylinder
and panels. Ask about **ADC** and **CLM** dryers in large capacities.

Service Tips By Ed

Laundromat - Dryer/Washer Preventive Maintenance

DRYERS

Weekly: Check the vents on the motors to assure they aren't clogged with lint – vacuum well to keep motor clean and prevent premature motor failure. Do not use canned compressed air as this may drive lint deep into motor windings.

Check lint filters for holes and tight fit. Replace as needed. When checking the lint filter on stack dryers, fully remove filter and check the drum roller wheels for wear and tear. If the basket is not turning smoothly or is noisy, replace the full set of wheels.

Monthly: Vacuum lint from the outside of the dryer and from the burner area. Use canned compressed air to spray lint off electronic boards. Inspect for any loose burned wires. Replace as needed. Check the dryer for proper heating. Make sure doors close securely; tighten "acorn nut" closure as needed.

Yearly: Have exhaust vents to roof or through side wall professionally cleaned. Inspect to assure there are no external screens that will capture lint and increase drying times. If you do not keep your exhaust vents clean, the air flow safety switch will not close properly and your dryer may fail to heat. Check burner tubes for lint or carbon build up. To clean, remove tubes and clean under warm water – dry thoroughly before replacing. Check to assure that make up air vents in dryer enclosure are unobstructed and operate properly. Lack of make up air will cause air flow switch problems.

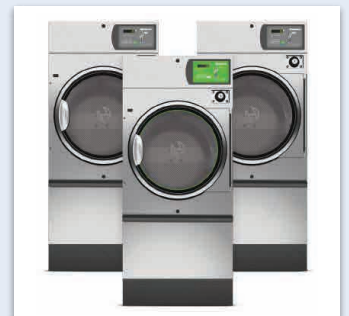

WASHERS

Weekly: Clean soap chutes and area under chutes. Check drain valves to assure they fully close and are not leaking during cycle. When washers are not in use, check for water running out drain valve – if you see or hear water, you have a water valve that is not closing fully. It has debris in it or needs to be replaced.

Monthly: Inspect and replace worn belts. Check washers for noise in main bearings, motors. Debris caught between drum and shell can also cause noise. Inspect the anchor bolts and grout.

Yearly: Have main drains professionally cleaned to prevent them from backing up or causing odor by standing water in troughs. Check the screens in the fill hoses. Clean them or replace them. Dirty screens mean slow fills.

A little preventive maintenance for your washers and dryers will make your laundry run more efficiently and reduce break downs.

Parts Ideas from Barb

Tumble Dryer Trunnion Replacement

You don't need Paul Bunyan to fix your trunnion. Even though he has the strength of ten men, in just a short time our technicians can. If you can lift up your dryer drum more than an inch, stop running the dryer now, before you're in a pinch. The clunking and clanking noises are key. Act now to avoid this tragedy. With New Years Eve's clock ticking fast, "tick tock". We have the bearings, flange and pillow block. Purchase parts before your dryers are on the fritz. We stock all the latest trunnion and bearing kits. I'll package the trunnion and put it in a big box. If the snow gets too deep, I'll call Babe the blue ox. Good tidings I wish you with holiday cheer. Merry Christmas all and a joyful New Year.

Huebsch Tumble Dryer trunnion & bearings

ECOLAB®
