

THE HORTON FEATURES

Horton
STRENGTH & SAFETY IN EVERY DETAIL™

HOPS™

HORTON OCCUPANT PROTECTION SYSTEM™.
WHEN AND WHERE YOU NEED IT.

When lives hang in the balance, Horton's exclusive HOPS system holds them in place.

KEY ADVANTAGES

Emergency crews deserve the best protection when they're performing the vital work of saving lives. That's why our exclusive Horton Occupant Protection System, or HOPS, is standard on every ambulance we build. HOPS is a fully tested system that combines advanced restraints, multi-density head protection, tubular airbags and head curtain airbags to provide a level of advanced protection for first responders in a rollover event. We've expertly engineered protection in every direction to help keep your crews safe.

■ AIRBAG PROTECTION WHERE IT COUNTS

HOPS is designed with two types of airbags—inflatable head curtain and tubular structure—that are made with progressive foam at head-strike points to absorb energy upon impact. The inflatable head curtain protects the attendant from the inhalation area cabinet. Used with the attendant and CPR seats, the tubular structure airbag provides additional head protection.

■ SECURITY AND ACCESS WITH 4-POINT SEAT BELTS

Horton's Per4Max™ detachable 4-point seat belt harness system provides an additional level of protection with automatic retractors at both shoulders and hips. Its innovative design allows responders to move forward and access patients without removing the seat belt.

■ ONE-CLICK BUCKLE ADDS CONVENIENCE

An easy-release, one-click buckle on the Per4Max 4-point seat belts means responders can quickly remove their belts when time is of the essence.

TWO TYPES OF AIRBAGS DEPLOYED

4-POINT SEAT BELTS PROTECT, WHILE ALLOWING ACCESS TO PATIENT

SEAT BELTS HAVE EASY-TO-USE ONE-CLICK BUCKLE
